

# ALYX

Autonomous Intelligence Layer

Infrastructure for On-Chain Intelligence Systems

## A Coordinated On-Chain Intelligence Layer

ALYX is a Layer 1 protocol where assets, liquidity, and execution operate in a unified system. Built for AI-native applications, decentralized exchange infrastructure, and intelligent execution.

## Protocol Architecture

Network Layer → Asset Layer → Liquidity Layer → Intelligence Layer

## Token Allocation

Treasury 30% | Ecosystem 25% | Validators 20% | Community 15% | Foundation 10%

## Strategic Positioning

ALYX is infrastructure for autonomous systems. It coordinates assets, liquidity, validators, and execution.
